If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

### REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: Applicant's independent claim 1 reads as followed:

"A composition for fire-resisting and fire-extinguishing comprising monobasic sodium phosphate, dibasic ammonium phosphate, borax, boric acid, polyoxyalkylated alkyl phosphoric acid ester and water in a ratio of about 1: about 1 ~ 5: about 0.3 ~ 1.5: about 0.3 ~ 1.5: about 0.3 ~ 1.5: about 10 ~ 20 by weight, respectively."

Applicant's said independent claim is deemed to be free of any prior-art rejection since there are no prior-art references, either individually or in combination, that teach or suggest a composition which contains all the above components in the claimed concentration ratios. While all the above components are individually known in the art to be used in fire extinguishing and/or flame retarding compositions, their combination together at the claimed concentration ratios, is unknown and unobvious over the prior-art.

The closest piece of prior-art is deemed to be Rock U.S. Patent Number 5,156,890. Rock teaches a method for imparting flame resistance to fabric articles comprising natural or regenerated fibers is provided for. The method comprises: applying a detergent solution to fabric articles; rinsing the detergent solution from the fabric articles; applying an aqueous solution of one or more water-soluble flame retardant compounds to the damp fabric articles; removing excess amounts of the aqueous flame retardant solution from the fabric articles; recycling the excess amount of the aqueous retardant solution for use in treating other fabric articles; filtering the

recycled aqueous flame retardant solution; and drying the fabric articles. Specifically disclosed flame retarding mixtures taught by Rock are: 1) borax, boric acid and diammonium phosphate (47/20/33), and 2) borax, boric acid and sodium phosphate dodecahydrate (50/35/15). Said mixtures are subsequently added to an aqueous composition at a concentration from about 8 to about 30 wt. %, see column 4, lines 38-58 and claims 3 and 6. Please note that the sodium phosphate dodecahydrate component is a species of a "sodium phosphate, dibasic" and NOT a species of a "sodium phosphate, monobasic" as claimed by applicant.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

#### ***Prior-Art Cited But Not Applied***

Any prior-art reference which is cited on FORM PTO-892 but not applied, is cited only to show the general state of the prior-art at the time of applicant's invention.
